

CONTENTS

Chapter 1 Practice for Ad Hoc Problems

- 1.1 Mechanism Analysis Method
- 1.2 Statistical Analysis Method
- 1.3 Problems

Chapter 2 Practice for Simulation Problems

- 2.1 Straightforward Simulation
- 2.2 Sieve Method
- 2.3 Construction Method
- 2.4 Problems

Chapter 3 Practice for Number Theory

- 3.1 Practice for Prime Numbers
 - 3.1.1 Generating Prime Numbers by Sieve
 - 3.1.2 Testing Big Prime Numbers
- 3.2 Solving Indeterminate Equations and Congruence
 - 3.2.1 Greatest Common Divisor and Indeterminate Equations
 - 3.2.2 Congruence and Congruence Equations
- 3.3 Multiplicative Function
 - 3.3.1 Getting the Number of Relatively Prime with n by Using Euler's Function (φ)
 - 3.3.2 Getting the number of Prime Factors of Non-Perfect Square n by Using Möbius Function (μ)
- 3.4 Problems

Chapter 4 Practice for Combinatorics

- 4.1 Permutation and Combination
 - 4.1.1 Generating the Next Permutation and Combination Based on Lexicographic Order
 - 4.1.2 Generating All Permutations and Combinations Based on Lexicographic Order
- 4.2 Enumeration of Permutation and Combination
 - 4.2.1 Normal Formula for Enumeration of Permutation and Combination
 - 4.2.2 Two Special Formula for Enumeration of Permutation and Combination
- 4.3 Including Excluding Principle and Drawer Principle
 - 4.3.1 Solving Existence Problem by Drawer Principle
 - 4.3.2 Enumerating union of sets by Including Excluding Principle
- 4.4 Polya's Theorem
 - 4.4.1 Polya's Theorem
 - 4.4.2 Getting the Number of equivalence classes Generated by Permutation Group
- 4.5 Problems

Chapter 5 Practices for Greedy Algorithms

- 5.1 Practices for Greedy Algorithms
- 5.2 Greedy-Choices based on Sorted Data
- 5.3 Greedy Algorithms used with other Methods to solve Problems
- 5.4 Problems

Chapter 6 Dynamic Programming

- 6.1 Linear DP
 - 6.1.1 Linear DP
 - 6.1.2 Subset Sum
 - 6.1.3 Longest Common Subsequence
 - 6.1.4 Longest Increasing Subsequence
- 6.2 Dynamic Programming on a Tree
- 6.3 Dynamic Programming of State Compression
- 6.4 Optimization of 1D/1D DP
- 6.5 Problems

Chapter 7 Practice for Advanced Data Structure

- 7.1 Suffix Array
 - 7.1.1 Suffix Array

- 7.1.2 The Longest Common Prefix
- 7.1.3 Application of Suffix Array
- 7.2 Segment Tree
 - 7.2.1 Basic Concept and Basic Operations of Segment Tree
 - 7.2.2 Single-Point Update of Segment Tree
 - 7.2.3 Subinterval Update of Segment Tree
- 7.3 Special Graphs
 - 7.3.1 Euler Graph
 - 7.3.2 Hamiltonian Graph
 - 7.3.3 Maximum Independent Set
 - 7.3.4 Articulation Point, Bridge and Biconnected Component
- 7.4 Problems

Chapter 8 Practice for Computation Geometry

- 8.1 Point, Line Segment, and Plan
 - 8.1.1 Dot Product and Cross Product
 - 8.1.2 Line Segment Intersection
 - 8.1.3 Solving Polyhedron Problems by Euler's formula
- 8.2 Calculation of Union of Rectangles' Area by Scanning Line Algorithm
 - 8.2.1 Scanning in Vertical Direction
 - 8.2.2 Scanning in Horizontal Direction
- 8.3 Intersection of Half-Planes
 - 8.3.1 On-Line Algorithm for Intersection of Half-Planes
 - 8.3.2 Polar Angle
- 8.4 Convex Hull and Rotating Calipers
 - 8.4.1 Convex Hull
 - 8.4.2 Rotating Calipers
- 8.5 Problems
