

CONTENTS

CONTENTS
PERFACE

Part 1 Fundamental Programming Skills

Chapter 1 Practice for Simple Computing

- 1.1 Improving programming Style
- 1.2 Multiple Test Cases
- 1.3 Precision of Real Number
- 1.4 Improving Time Complexity by Dichotomy
- 1.5 Problems

Chapter 2 Simple Simulation

- 2.1 Simulation of Direct Statement
- 2.2 Simulation by Sieve Method
- 2.3 Simulation by Construction
- 2.4 Problems

Chapter 3 Simple Recursion

- 3.1 Calculation of Recursive Functions
- 3.2 Solving Problems by Recursive Algorithms
- 3.3 Solving Recursive datum
- 3.4 Problems

Summary of Part 1

Part 2 Experiments for Linear Lists

Chapter 4 Linear Lists Accessed Directly

- 4.1 Application of Arrays[1]: Calculation of Dates
- 4.2 Application of Arrays[2]: Calculation of High Precision Numbers
- 4.3 Application of Arrays[3]: Representation and Computation of Polynomials
- 4.4 Application of Arrays[4]: Calculation of Numerical Matrices
- 4.5 Character Strings[1]: Storage Structure of Character Strings
- 4.6 Character Strings[2]: Pattern Matching of Character Strings
- 4.7 Problems

Chapter 5 Applications of Linear lists for Sequential Access

- 5.1 Application of Sequence Lists
- 5.2 Application of Stacks
- 5.3 Application of Queues
- 5.4 Problems

Chapter 6 Generalized List Using Indexes

- 6.1 Solving Problems By Using Dictionaries
- 6.2 Solving Problems By Using Hash Table and Hash Method
- 6.3 Problems

Chapter 7 Sort of Linear Lists

- 7.1 Using Sort Function in STL
- 7.2 Using Sort Algorithms
- 7.3 Problems

Summary of Part 2

Part 3 Experiments for Trees

Chapter 8 Programming by Tree Structure

- 8.1 Solving Hierarchical Problems by Tree Traversal
- 8.2 Union-Find Sets Supported by Tree Structure
- 8.3 Calculation of Sum of Weights of Subtrees by Binary Indexed Trees
- 8.4 Problems

Chapter 9 Applications of Binary Trees

- 9.1 Converting Ordered Trees to Binary Trees
- 9.2 Paths of Binary Trees
- 9.3 Traversal of Binary Trees
- 9.4 Problems

Chapter 10 Applications of Classical Trees

- 10.1 Binary Search Trees
- 10.2 Binary Heaps

10.3 Huffman Trees
10.4 Problems
Summary of Part 3

Part 4 Experiments for Graphs

Chapter 11 Applications of Graph Traversal
11.1 BFS Algorithm
11.2 DFS Algorithm
11.3 Topological Sort
11.4 Connectivity of Undirected Graphs
11.5 Problems
Chapter 12 Algorithms of Minimum Spanning Trees
12.1 Kruskal Algorithm
12.2 Prim Algorithm
12.3 Problems
Chapter 13 Algorithms of Best Paths
13.1 Warshall Algorithm and Floyd-Warshall Algorithm
13.2 Dijkstra's Algorithm
13.3 Bellman-Ford Algorithm
13.4 Shortest Path Faster Algorithm (SPFA Algorithm)
13.5 Problems
Chapter 14 Algorithms of Bipartite Graphs and Flow Networks
14.1 Maximum Matching in Bipartite Graphs
14.2 Flow Networks
14.3 Problems
Summary of Part 4
